Environmental Health 300 Section: 57

Independent Study (190217)

Instructor TBD

2016 Spring (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

An opportunity for independent study is offered for interested and qualified students or small groups of students. Arrangements must be made with individual faculty members and are limited by the amount of faculty time available. These programs are open to all students who wish to go beyond the content of the regular courses. Opportunities are provided for independent studies in the fields of aerosol technology, air pollution control, environmental health management, environmental epidemiology, environmental microbiology, industrial hygiene and ventilation, nuclear medicine, occupational medicine, radiological

health, respiratory biology, respiratory epidemiology, injury epidemiology, ergonomics, and solid waste management.

Independent Study (190217)

John Spengler

2020 Spring (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

An opportunity for independent study is offered for interested and qualified students or small groups of students. Arrangements must be made with individual faculty members and are limited by the amount of faculty time available. These programs are open to all students who wish to go beyond the content of the regular courses. Opportunities are provided for independent studies in the fields of aerosol technology, air pollution control, environmental health management, environmental epidemiology, environmental microbiology, industrial hygiene and ventilation, nuclear medicine, occupational medicine, radiological health, respiratory biology, respiratory epidemiology, injury epidemiology, ergonomics, and solid waste management.

Additional Course Attributes:

Independent Study (190217)

Marc Weisskopf

2020 Spring (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

An opportunity for independent study is offered for interested and qualified students or small groups of students. Arrangements must be made with individual faculty members and are limited by the amount of faculty time available. These programs are open to all students who wish to go beyond the content of the regular courses. Opportunities are provided for independent studies in the fields of aerosol technology, air pollution control, environmental health management, environmental epidemiology, environmental microbiology, industrial hygiene and ventilation, nuclear medicine, occupational medicine, radiological health, respiratory biology, respiratory epidemiology, injury epidemiology, ergonomics, and solid waste

management.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
ALL: Exclude from Canvas Feed	Exclude from Canvas Feed

2021 Spring (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

An opportunity for independent study is offered for interested and qualified students or small groups of students. Arrangements must be made with individual faculty members and are limited by the amount of faculty time available. These programs are open to all students who wish to go beyond the content of the

regular courses. Opportunities are provided for independent studies in the fields of aerosol technology, air pollution control, environmental health management, environmental epidemiology, environmental microbiology, industrial hygiene and ventilation, nuclear medicine, occupational medicine, radiological health, respiratory biology, respiratory epidemiology, injury epidemiology, ergonomics, and solid waste management.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
HSPH: Indpt. Study / Research	YES
ALL: Exclude from Canvas Feed	Exclude from Canvas Feed
Course Evaluation	Course Evaluation exempt

Independent Study (190217)

Phil Demokritou

2016 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

An opportunity for independent study is offered for interested and qualified students or small groups of students. Arrangements must be made with individual faculty members and are limited by the amount of faculty time available. These programs are open to all students who wish to go beyond the content of the regular courses. Opportunities are provided for independent studies in the fields of aerosol technology, air pollution control, environmental health management, environmental epidemiology, environmental microbiology, industrial hygiene and ventilation, nuclear medicine, occupational medicine, radiological health, respiratory biology, respiratory epidemiology, injury epidemiology, ergonomics, and solid waste management.

Additional Course Attributes:

Independent Study (190217)

Instructor TBD

2015 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

An opportunity for independent study is offered for interested and qualified students or small groups of students. Arrangements must be made with individual faculty members and are limited by the amount of faculty time available. These programs are open to all students who wish to go beyond the content of the regular courses. Opportunities are provided for independent studies in the fields of aerosol technology, air pollution control, environmental health management, environmental epidemiology, environmental microbiology, industrial hygiene and ventilation, nuclear medicine, occupational medicine, radiological health, respiratory biology, respiratory epidemiology, injury epidemiology, ergonomics, and solid waste management.

Industrial Hygiene Internship (190219)

Instructor TBD

2015 Fall (20 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Dr. R. Herrick
20 Credits
Field work. Normal working hours of hte company, in addition to time required for relevant reading.

The student works in an industrial or similar workplace under the direction of a qualified and experienced industrial hygienist (a mentor). Generally, the first half of the six-month period is devoted to learning evaluation techniques (e.g., personal air sampling, direct reading instrumentation, ventilation measurements), and the second half to studying some specific hazard or problem in depth, and preparing material for presentation in the succeeding course, EH 267.

Course Note: Completion of the first year of the two-year master's degree program in Industrial Hygiene required; ordinal grading option only; no auditors (5.06)

Course evaluations are an important method for feedback on the quality of course offerings. The submission of a course evaluation is a requirement for this course. Your grade for the course will be made available only after you have submitted responses to at least the first three questions of the on-line evaluation for this course.

Field Experience in International Occupational Health and Safety (190221)

David Christiani

2018 Spring (2.5 Credits) **Schedule:** MTWRF 0900 AM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

This intensive two to three week course, in collaboration with Kaohsiung Medical University's (KMU) Graduate Institute of Occupational Safety and Health, will focus on several major heavy industries in Kaohsiung, Taiwan. This course will be also attended by master and doctoral students from Graduate Institute of Occupational Safety and Health, KMU. Lectures will cover these industrial processes and their known health and safety risks. Students will be taken on several supervised site visits to each industry, and will be encouraged to process their observations through interactive discussions. This course will also provide exposure to cultural issues around work, work organization, labor-management relations, and governmental and academic roles relevant to occupational safety and health in these settings. The faculty includes several HSPH alumni and experts in Taiwan, including Dr. Ming-Tsang Wu, MD, ScD, MOH; Dr. Chiung-Yu Peng, PhD; Dr. Yung-Chang Lai, PhD; Dr. Chih-Wei Lu, PhD; Dr. Jin-Lian Tsai, PhD; Dr. Chi-Kung Ho, MD, MPH.

Course Activities: Site visits; seminar presentations (case-study participatory approach.) Site visits will be supervised by the above faculties, along with exposure assessment experts from the industries. Written reports of site visits will be prepared by students, with oral presentations and discussion.

Principles of Toxicology (190224)

Jin-Ah Park

2020 Fall (2.5 Credits) **Schedule:** MW 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 32

The course is designed to expose students to the principles and methods that should be used to determine whether a causal relationship exists between specific doses of an agent and an alleged adverse effect, observed primarily in humans. Integration of principles and methods of toxicology is extremely important since the primary purpose of toxicology is to predict human toxicity. Toxicological data obtained in animal studies must be placed in proper relationship to the exposure observed in the human population. The course deals with organ systems and whole organisms but relies on an understanding of the mechanistic approaches covered in EH508. Key target organs, selected classes of toxic agents and the application of toxicological principles are covered. Students are assigned a topic for a short presentation.

Course notes: This course may be taken for either 2.5 credits (section 1) or 5.0 credits (section 2).

Class Notes:

Section 1 - 2.5 credits - is only for those students with a prior medical degree.

Section 2 - 5.0 credits - is for all other students.

THIS CLASS HAS PRIORITY ENROLLMENT

Priority Wave Groups

Wave 1 | EH Plans and Subplans

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 8/13/2020 11:00AM – 8/25/2020 11:59PM

Wave 2 | 8/26/2020 12:00AM – 8/27/202011:59PM

Wave 3 | 8/28/2020 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **HSPH: HSPH Degr + PHD Stu**

Course notes: This course may be taken for either 2.5 credits (section 1) or 5.0 credits (section 2).

Class Notes: **Section 1 - 2.5 credits - is only for those students with a prior medical degree.**

Section 2 - 5.0 credits - is for all other students.

THIS CLASS HAS PRIORITY ENROLLMENT

Priority Wave Groups

Wave 1 | EH Plans and Subplans

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 8/13/2020 11:00AM – 8/25/2020 11:59PM

Wave 2 | 8/26/2020 12:00AM – 8/27/202011:59PM

Wave 3 | 8/28/2020 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **HSPH: HSPH Degr + PHD Stu**

Additional Course Attributes:

Environmental Health 504 Section: 2

Principles of Toxicology (190224)

Jin-Ah Park

Vishal Vaidya

2017 Fall (5 Credits) **Schedule:** MW 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 32

The course is designed to expose students to the principles and methods that should be used to determine whether a causal relationship exists between specific doses of an agent and an alleged adverse effect, observed primarily in humans. Integration of principles and methods of toxicology is extremely important since the primary purpose of toxicology is to predict human toxicity. Toxicological data obtained in animal studies must be placed in proper relationship to the exposure observed in the human population. The course deals with organ systems and whole organisms but relies on an understanding of the mechanistic approaches covered in EH508. Key target organs, selected classes of toxic agents and the application of toxicological principles are covered. Students are assigned a topic for a short presentation.

Course notes: This course may be taken for either 2.5 credits (section 1) or 5.0 credits (section 2).

Requirements: **HSPH: HSPH Degr + PHD Stu**

Additional Course Attributes:

Environmental Exposure, Epidemiology and Risk Practicum (190226)

Instructor TBD

2014 Fall (5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 25

The practicum is designed to allow Exposure, Epidemiology, and Risk (EER) Program students to integrate

what they have learned and to apply this knowledge in the evaluation of a problem of importance. Each student must design and conduct an independent analysis of an environmental problem. Student projects must demonstrate analytical sophistication and critical interpretation of relevant science in support of decision making. Each student must prepare a written report and make an oral presentation of results to the EER faculty.

Master's Thesis and Collaborative Research in Environmental Health (204464)

Francine Laden

John Evans

Douglas Dockery

2021 Spring (5 Credits) **Schedule:** W 0345 PM - 0700 PM

Instructor Permissions: None **Enrollment Cap:** 30

The objective of the practicum is to allow Environmental Health Masters of Science students to integrate what they have learned and apply this knowledge in the evaluation of a problem of importance.

You must first develop a proposal for an independent research project, with an identified faculty member as an approved advisor for this project. The advisor could be one of the course instructors, but generally involves other faculty members at the Harvard Chan School.

The project must be well-defined, well-executed, must demonstrate knowledge of the chosen area of research, and should clearly describe the findings in the scope of the wider literature. Given the relatively short amount of time available for completion of the thesis, a clear presentation of gaps in your current work and potential future directions may be as important as the analysis itself.

Registration Note: Restricted to second year EH-SM2 students.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Fundamentals of Human Environmental Exposure Assessment (190227)

David Macintosh

2020 Fall (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 37

This course is designed to provide the tools and foundations necessary to understand the fate and transport of environmental contaminants in various environmental media and to estimate their impact on human exposure. The course will consider human exposure assessment in the context of risk assessment.

Physical-chemical properties of contaminants and environmental media will be considered as they relate to developing basic models of human exposure.

Course Activities: Class discussion, computer workshops, lectures, homework assignments, final exam.

Course Note: Calculus and chemistry required. Course required for all EER program students.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Interdisciplinary Training in Pulmonary Sciences Part I (190229)

Quan Lu

2020 Fall (2.5 Credits)		**Schedule:**	F 0100 PM - 0200 PM
			T 0945 AM - 1045 AM
Instructor Permissions:	Instructor	**Enrollment Cap:**	30

The intersection of environment and health is by necessity an interdisciplinary focus. The most promising advances in lung biology and respiratory disease are resulting from teams of scientists with diverse disciplinary training, including biology, medicine, engineering, and physics. In addition to a strong foundation in a specific discipline, the ability to recognize and act upon opportunities presented by outside disciplines is a crucial skill. This course is designed to train scientists to approach lung biology and respiratory diseases with an interdisciplinary perspective, in particular by bridging the gap between life sciences and physical/engineering sciences. With a focus on laboratory sciences and on mechanistic levels of understanding, course materials will cover 3 main problem areas: asthma, air pollution, and lung infection. The course consists of weekly course-meetings (lectures and case-studies) plus weekly research seminars from the physiology program. Students will gain skills in recognizing the relative strengths and weaknesses of different disciplinary approaches applied to pulmonary sciences, in designing interdisciplinary experiments effectively, and in interpreting interdisciplinary results critically.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | EH Plans and Subplans

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 8/13/2020 11:00AM – 8/25/2020 11:59PM

Wave 2 | 8/26/2020 12:00AM – 8/27/202011:59PM

Wave 3 | 8/28/2020 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **HSPH: HSPH Degr + PHD Stu**

Gina McCarthy

2019 Spring (1.25 Credits)		**Schedule:**	M 0945 AM - 1115 AM
Instructor Permissions:	None	**Enrollment Cap:**	50

Students will learn how environmental protection is public health prevention. The course will examine how science is imperative to public health and the challenges facing science today. Students will explore several case studies related to the most pressing modern environmental policy issues.

This course will demonstrate the need for scientific communication, policy advocacy, and public service from the public health community, and will be helpful to anyone interested in working in environmental policy or environmental health sciences at any level of government or service agency.

Instructor Permissions: None **Enrollment Cap:** 15

Lectures, case studies. 3 hours per day during Winter Session. The course will be held at the Cyprus International Institute in Limassol, Cyprus.

The interaction between genes and environmental and/or occupational exposures plays a major role in disease development. This course will focus on the underlying science of gene-exposure interactions and will use examples of such interactions and their health consequences. Gene-environment interactions will be discussed using an epidemiologic approach to address how genetic polymorphisms can influence susceptibility to disease. This course will enable students to understand and apply findings of genetic association studies and will consist of detailed evaluation of specific examples of gene-exposure interactions and their health consequences, as well as their social implications.

Research Design in Environmental Health (190234)

Joel Schwartz

2021 Spring (2.5 Credits) **Schedule:** F 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 20

The seminars consist of student presentation of plans for collection and analysis of data, with discussion by students and faculty. Preparatory work is done under tutorial arrangements with members of the faculty. The emphasis is on conceptual issues necessary for the development of a feasible and informative study.

Course Activities: Individual student paper and presentation, class discussion, oral critique of another student's research proposal and student and faculty critiques.

Course Note: This course is aimed primarily at environmental health doctoral students.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | EH Department Students

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/7/2021 11:00AM – 1/19/2021 11:59PM

Wave 2 | 1/20/2021 12:00AM – 1/21/2021 11:59PM

Wave 3 | 1/22/2021 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **HSPH: HSPH Degr + PHD Stu**

Additional Course Attributes:

Environmental Health 520 Section: 1

Research Design in Environmental Health (190234)

Joel Schwartz

2020 Spring (2.5 Credits) **Schedule:** F 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 20

The seminars consist of student presentation of plans for collection and analysis of data, with discussion by students and faculty. Preparatory work is done under tutorial arrangements with members of the faculty. The emphasis is on conceptual issues necessary for the development of a feasible and informative study.

Course Activities: Individual student paper and presentation, class discussion, oral critique of another student's research proposal and student and faculty critiques.

Course Note: This course is aimed primarily at environmental health doctoral students.

Annette Peters

Douglas Dockery

2017 Fall (1.25 Credits) **Schedule:** T 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 20

The course will assess the impact of the environment on the onset and exacerbation of cardiovascular diseases. Environmental exposures that have been implicated to impact cardiovascular disease are predominantly air pollution, second hand smoke, noise and heat. The course will present teaching examples showing the study designs applied in environmental epidemiology focusing on cardiovascular disease. Short-term health effects as well as health effects of continuous exposure over decades on the cardiovascular system by these environmental exposures will be demonstrated. The course will explore the evidence for the biological plausibility of the observed health effects and will highlight recent developments in this area concerning gene-environment interactions.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Indoor Environmental Quality and Health (190236)

Phil Demokritou

2016 Fall (2.5 Credits) **Schedule:** R 0830 AM - 1020 AM

Instructor Permissions: None **Enrollment Cap:** 25

This course aims to introduce students to the concepts necessary for analyzing the indoor environments and help them to understand and address indoor environmental quality problems in the modern built environments and the link to health, comfort and productivity of the occupants. Emphasis is placed on understanding the nature of indoor air quality; indoor air pollutants, including their sources and health effects; generation and transport of pollutants; modeling of IAQ in buildings; modern building systems including Heating Ventilation and Air conditioning systems as well as air cleaning systems; IEQ regulations, guidelines and building standards; and procedures for assessing indoor air quality issues.

Work, Health, Productivity: Sustainability and Human Capital (190237)

Eileen McNeely

2019 Spring (2.5 Credits) **Schedule:** MTWRF 0100 PM - 0400 PM

Instructor Permissions: None **Enrollment Cap:** 15

This course examines corporate strategy aimed at the management of health risks across the business value chain and beyond regulatory compliance. Students explore how decisions about strategy are shaped by geopolitical and economic conditions (e.g. trade policies), corporate definitions of health and sustainable development, and corporate beliefs about social responsibility, the individual's responsibility for health, and the impact of employee wellness on productivity and the bottom line.

Fundamental concepts that inform corporate health strategy are discussed such as: different frames for the definition of health; the meaning of work in health and well-being; the relationship between different work arrangements and health; the impact of global trade on human capital, production processes and supply chains; the analysis of supply chains using the science of life cycle assessment; the market for health care and occupational medicine; the structure and function of employee wellness programs; the establishment of a culture of wellness; the measurement of health, employee engagement, and productivity; and the rating of corporate performance according to international standards for social responsibility, sustainability and occupational health and safety.

Through seminar discussions, case studies, field trips and assignments, the participants will evaluate different corporate health strategies and benchmark corporate performance in health for one manufacturing company across its global supply chain. The goal of this class is to introduce current and future leaders in health to the potential of private enterprise to enhance the quality of worklife and employee well-being for gains in productivity and profit, and also, for the benefit of sustainability and social impact in terms of the stability, health, and welfare of human capital in the local and world community.

Work, Health, Productivity: Sustainability and Human Capital (190237)

Instructor TBD

2013 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 15

This course provides a broad foundation for evaluating the health care needs of employees, including both work-related issues and general health promotion. Through seminar discussions and field experiences, the participants consider the many frames for thinking about worker health, such as the perspectives of employees, managers, companies, insurers, health care providers and labor groups.

The goal of this class is to develop a sensible approach to the assessment, planning and evaluation of employee health programs. The class offers individuals who are interested in workers' health care policy and economics, the opportunity to come together in discussion and purpose to propose innovation in the current system of employee health care.

Water and Development (190238)

Instructor TBD

2013 Spring (5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 20

Societies blessed with reliable, adequate supplies of good quality water have developed better than societies not so blessed. In order to provide adequate water security, societies invest in infrastructure and institutions to manage water resources more effectively, and to provide better water services. The course will explore the paths taken by now-rich countries and examine the consequences for human well-being, and will assess what is and what is not relevant from this experience for developing countries. Discussions will be organized around real-world case studies in which the instructor has been an active participant. The course will take an inter-disciplinary view and employ tools of history, hydrology, engineering, economics, political science and epidemiology.

Course Activities: Lecture, case studies and active learning through class participation. Brief written assignments evaluating select case studies and a term project relating to a real-world water intervention.

Environmental Health 530 Section: 1

Confronting Climate Change: A Foundation in Science, Technology, and Policy (216475)

Daniel Schrag

2020 Fall (5 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will consider the challenge of climate change and what to do about it. Students will be introduced to the basic science of climate change, including the radiation budget of the Earth, the carbon cycle, and the physics and chemistry of the oceans and atmosphere. We will look at reconstructions of climate change through Earth history to provide a context for thinking about present and future changes. We will take a critical look at climate models used to predict climate change in the future, and discuss their strengths and weaknesses, evaluating which forecasts of climate change impacts are robust, and which are more speculative. We will spend particular time discussing sea level rise and extreme weather (including hurricanes, heat waves, and floods). We will look at the complex interactions between climate and human society, including climate impacts on agriculture and the relationship between climate change, migration and conflict. We will also discuss strategies for adapting to climate change impacts, and the implications of those strategies for sub-national and international equity.

The last half of the class will consider what to do about climate change. First, we will review the recent history of greenhouse gas emissions, as well as various national and international efforts to limit them in the future. We will discuss reducing carbon emissions using forestry, agriculture and land use, and then focus on how to transform the world's energy system to eliminate CO2 emissions. We will conclude by examining different strategies for accelerating changes in our energy systems to limit greenhouse gas emissions.

The course is intended as a foundational course on climate change for students from around the university, preparing them for more specialized courses in their individual concentrations or degree programs. No

prerequisites are required; students will be encouraged to apply their different preparations and interests to the various individual and group assignments. The course emphasizes the scientific and technological aspects of climate change (including the clean energy transition), but in the context of current issues in public policy, business, design and public health.

Special Topics in Environmental Health (207083)

Andrea Bellavia

2021 Spring (2.5 Credits) **Schedule:** MTWRF 0100 PM - 0400 PM

Instructor Permissions: None **Enrollment Cap:** 20

Special Topics in Environmental Health.

See class notes for course description.

Topic: **Stat Methods for Env. Mixtures**

Class Notes: **This course will provide an introduction to different techniques to analyze exposure to mixtures in environmental health. Topics will include statistical methods for highly-correlated exposures such as: classical methods (multiple regression) and their limitations; principal component analysis; hierarchical modeling; variable selection techniques (Lasso, ridge regression, elastic net), Bayesian Kernel Machine Regression (BKMR); Weighted Quantile Sum (WQS) Regression. The course will integrate lectures presenting the methods, case-studies from recently published papers, and hands-on data sessions. Lectures will present in a rigorous yet non-theoretical way the methods of interest, discussing when each method presented is appropriate for use and for which research question it can be applied.**

Pre-Requisites: BST 201 or PHS2000A

THIS CLASS HAS PRIORITY ENROLLMENT

Priority Wave Groups

Wave 1 | EH Department Students

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 11/12/2020 11:00AM – 12/1/2020 11:59PM

Wave 2 | 12/2/2020 12:00AM – 12/3/2020 11:59PM

Wave 3 | 12/4/2020 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **HSPH: EH 550 Topic 2**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Environmental Health 550 Section: 1

Rainer Sauerborn

2018 Spring (2.5 Credits) **Schedule:** MW 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 20

The course will provide hands-on skills to use existing high quality health data from Africa and Asia to analyze the impact of climate change on mortality (by cause, age and sex, location and day of death). Participants will learn the basics of the main statistical tool to do this, time series analysis. In addition, we will show students how to download daily weather data (temperature, rainfall e.g.) from form publicly available sources for the chosen study area and time period. The course will use whole population, longitudinal, retrospective, long term (since 1990) high quality health cohort data (also dubbed Health and Demographic Surveillance Systems) from www.INDEPTH-network.org sites in Africa and Asia.

Prerequisites: BST 201 or ID 201 or PHS 2000A.

Topic: **Rsrch Mthds on Clim Chang Hlth**

Environmental Health 945S Section: 1

Practice and Culminating Experience for Occupational and Environmental Health (211121)

David Rainey

Stefanos Kales

2021 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 10

EH 945S is a degree requirement for students the 45-credit MPH program in the Occupational and Environmental Health field of study. Together with ID 263, this course fulfills the practicum requirement.

Students in the Master of Public Health program are required to develop and conduct a supervised project (practicum) addressing a clinical or public health question of interest. The practicum is arranged by the student on an individual basis with a host organization and may include any aspect of occupational and environmental health and safety. The expected time commitment is 120 hours. Students work with a host organization under the supervision of a preceptor (site supervisor) for their practicum and are expected to arrange the details of their practicum with the preceptor and obtain guidance and feedback throughout the project. Students submit a brief proposal (the Learning Agreement) which must be approved by the preceptor and the course instructor prior to starting their practicum work. The course culminates with an on-campus presentation of the results of the practicum in Spring 2. The course does not have formal

meeting times, as students are expected to meet with the course instructor independently to develop the practicum project and then at the end of the course for the presentation.

Requirements: **Course restricted to students in the MPH-45 OEH Field of Study**

Subject: Decision Science

Decision Science 500 Section: 1

Risk Assessment (191111)

John Evans

2020 Fall (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 37

Introduces the framework of risk assessment, considers its relationship with cost-benefit, decision analysis and other tools for improving environmental decisions. The scientific foundations for risk assessment (epidemiology, toxicology, and exposure assessment) are discussed. The mathematical sciences involved in developing models of dose-response, fate and transport, and the statistical aspects of parameter

estimation and uncertainty analysis are introduced. Case studies are used to illustrate various issues in risk assessment and decision making.

Course Activities: Lectures, discussions, case studies.

Course Note: Course required for all Exposure, Epidemiology and Risk Program students.

Class Notes:

A course materials fee may apply for this course. An upper estimate is listed below, and the final materials fee will be communicated to enrolled students at the beginning of the term. For more information and a list of past years' materials fees for the current semester's courses, please visit the Curriculum Center website.

Tamarra James-Todd

2021 Spring (2.5 Credits) **Schedule:** W 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 68

This course examines application of epidemiologic methods to environmental and occupational health problems. Objectives are to review methods used in evaluating the health effects of physical and chemical agents in the environment, to review available evidence on the health effects of such exposures, and to consider policy questions raised by the scientific evidence. Topics include lectures on methodology, seminars on the review and criticism of current literature, and presentations by outside experts on specific environmental and occupational health issues of current interest.

Course Prerequisites: ID201 or [EPI201 and (BST 201 or PHS2000A)]. Concurrent registration with instructor permission only.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Environmental and Occupational Epidemiology (190751)

Francine Laden

Marc Weisskopf

2018 Spring (2.5 Credits) **Schedule:** W 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 68

This course examines application of epidemiologic methods to environmental and occupational health problems. Objectives are to review methods used in evaluating the health effects of physical and chemical agents in the environment, to review available evidence on the health effects of such exposures, and to consider policy questions raised by the scientific evidence. Topics include lectures on methodology, seminars on the review and criticism of current literature, and presentations by outside experts on specific environmental and occupational health issues of current interest.

Course Prerequisites: ID201 or [EPI201 and (BST 201 or PHS2000A)]. Concurrent registration with instructor permission only.

Requirements: **HSPH: ID215**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Practice of Occupational Health (190774)

John Price

2021 Spring (5 Credits) **Schedule:** W 0800 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 25

Focuses on the assessment of workplace hazards, the physiology and biomechanical aspects of work, and a practical problem-solving approach to health problems in various work settings. Emphasizes the relationship between working conditions and health, with special reference to the recognition, measurement, and control of occupational hazards.

Course Note: MPH 45 students will meet the practicum requirement for the OEH field of study through supplemental project deliverables during the course.

Course Activities: Oral and written projects, class discussions, four walk-through field trips to local industries (field trips may take up to four hours).

Course Requirement: EH 262 recommended.

Respiratory Epidemiology (190780)

Diane Gold

2020 Fall (1.25 Credits) **Schedule:** R 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 27

This course focuses on the Environment, work and respiratory disease: evaluation and control/ sources of disparities in exposures and outcomes. Physician clinician-scientists and epidemiologists review up-to-date studies of environmental and occupational influences on asthma, COPD, viral respiratory infections (focusing on COVID19 and influenza), occupational lung disease, tuberculosis, lung cancer and sleep-disordered breathing. With an international perspective we evaluate environmental and occupational contributions to disparities in respiratory diseases. We share complementary clinical, pathologic, physiologic as well as epidemiologic methods for assessing respiratory outcomes. We critically discuss complementary study designs to document disease prevalence and incidence, and to assess the efficacy of control strategies to reduce exposures, disease and disparities in disease. if you are interested in learning more about the course, please view Harvard's Syllabus Explorer tool (https://syllabus.harvard.edu/) to view last year's syllabus

Course Prerequisites: ID201 or ID200 or EPI201 or EPI208 or EPI505 or ID538 or PHS2000A (all courses may be taken concurrently).

Advanced Regression for Environmental Epidemiology (190782)

Joel Schwartz

Antonella Zanobetti

2021 Spring (2.5 Credits)

Schedule: R 0100 PM - 0330 PM
T 0200 PM - 0330 PM

Instructor Permissions: None

Enrollment Cap: n/a

This course covers applied advanced regression analysis. Its focus is on relaxing classical assumptions in regression analysis to better match what epidemiological data really looks like. Specifically, the course will cover nonlinear exposure-response relationships and repeated measure designs, including non-parametric and semi-parametric smoothing techniques, generalized additive models, quantile regression, and time series models. In addition to the theoretical material, students will apply these techniques using R to actual datasets including modeling the effects of environmental exposures on health outcomes. These techniques also are widely applicable to problems in infectious disease, psychiatric, nutritional, occupational, and cancer epidemiology.

Course Activities: Lectures and structured workshops in the instructional computer facility.

Course Note: Basic biostatistics and a course in regression analysis recommended.

Advanced Regression for Environmental Epidemiology (190782)

Joel Schwartz

Antonella Zanobetti

2018 Spring (2.5 Credits) **Schedule:** R 0100 PM - 0330 PM
T 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 20

This course covers applied advanced regression analysis. Its focus is on relaxing classical assumptions in regression analysis to better match what epidemiological data really looks like. Specifically, the course will cover nonlinear exposure-response relationships and repeated measure designs, including non-parametric and semi-parametric smoothing techniques, generalized additive models, quantile regression, and time series models. In addition to the theoretical material, students will apply these techniques using R to actual datasets including modeling the effects of environmental exposures on health outcomes. These techniques also are widely applicable to problems in infectious disease, psychiatric, nutritional, occupational, and cancer epidemiology.

Course Activities: Lectures and structured workshops in the instructional computer facility.

Course Note: Basic biostatistics and a course in regression analysis recommended.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Priority Wave Groups

Wave 1 | EH Department Students

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/10/2019 01:00PM – 1/15/2019 11:59PM

Wave 2 | 1/16/2019 12:00AM – 1/17/2019 11:59PM

Wave 3 | 1/18/2019 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **HSPH: HSPH Degr + PHD Stu**

Epidemiology

Subject: Epidemiology

Epidemiology 201 Section: 1

Introduction to Epidemiology: Methods I (190267)

Murray Mittleman

2020 Fall (2.5 Credits)		**Schedule:**	TR 0945 AM - 1115 AM
Instructor Permissions:	None	**Enrollment Cap:**	175

EPI201 introduces the principles and methods used in epidemiologic research. The course discusses the conceptual and practical issues encountered in the design and analysis of epidemiologic studies for description and causal inference. EPI201 is the first course in the series of methods courses designed for students majoring in Epidemiology, Biostatistics and related fields, and those interested in a detailed introduction to the design and conduct of epidemiologic studies. Students who take EPI201 are expected to take EPI202 (Methods II).

Course is mutually exclusive with EPI200, EPI208, EPI500, and ID200. You may not take both this course and any of those courses.

EPI 201 and EPI 202 Lab Sections will be decided after enrollment through an internal survey.

Class Notes:

Introduction to Epidemiology: Methods I (190267)

Murray Mittleman

2018 Fall (2.5 Credits) **Schedule:** F 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 20

EPI201 introduces the principles and methods used in epidemiologic research. The course discusses the conceptual and practical issues encountered in the design and analysis of epidemiologic studies for description and causal inference. EPI201 is the first course in the series of methods courses designed for students majoring in Epidemiology, Biostatistics and related fields, and those interested in a detailed introduction to the design and conduct of epidemiologic studies. Students who take EPI201 are expected to take EPI202 (Methods II).

Course Note: Thursday or Friday lab required.
Course is mutually exclusive with EPI200, EPI208, EPI500, and ID200. You may not take both this course and any of those courses.

Requirements: **Course mutually exclusive with EPI200, EPI208, EPI500, EPI505, ID200, and ID538 + XREG requirements**

EPI202 is a seamless continuation of EPI201. This course builds on the material from EPI201 and extends to concepts of statistical inference, data analysis methods and causal inference in epidemiologic research. Principles and methods are illustrated with examples, and reviewed through homework and in-class exercises. This course is designed primarily for doctoral students majoring in Epidemiology and related fields, and those interested in a research career requiring a rigorous foundation in the design, conduct and analysis of epidemiologic studies.

EPI 201 and EPI 202 Lab Sections will be decided after enrollment through an internal survey.

Class Notes:

EPI 201 and EPI 202 Lab Sections will be decided after enrollment through an internal survey.

THIS CLASS HAS PRIORITY ENROLLMENT

Priority Wave Groups

Wave 1 | PHD PHS, GHP SM2

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 8/13/2020 11:00AM – 8/25/2020 11:59PM

Wave 2 | 8/26/2020 12:00AM – 8/27/202011:59PM

Wave 3 | 8/28/2020 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements:

EPI201 AND (BST201 or BST202&203 or BST206&207/8 or ID207 or PHS2000)
(all courses may be taken concurrently)

Additional Course Attributes:

Attribute	Value(s)
HSPH: Course Category	Category 2: Required Course
HSPH: Indpt. Study / Research	NO
All: Cross Reg Availability	Available for Harvard Cross Registration

Epidemiology 202 Section: 1

Epidemiologic Methods 2: Elements of Epidemiologic Research (190269)

Murray Mittleman

2017 Fall (2.5 Credits) **Schedule:** TR 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 175

Methods 2: Elements of Epidemiologic Research
Introduces elements of study design, data analysis and inference in epidemiologic research. Principles and methods are illustrated with examples, and reviewed through homework and in-class exercises. May serve as an introduction to more advanced study or as a concluding course for those desiring a working knowledge of epidemiologic methods. EPI 202 extends the concepts of study design, data analysis, and inference introduced in the introductory epidemiology courses.

Course Prerequisites:
if taking in Summer: (EPI201 or EPI500 or EPI208 or ID201 or ID207 or permission of the instructor) AND (BIO200 or BIO201 or ID201 or ID207 or BIO202&203 or BIO206&207/8/9) (all courses may be taken concurrently)

if taking in Fall: (EPI201 or permission of instructor) AND (BST200 or BST201 or ID200 or ID207 or BIO202&203 or BIO206&207/8/9)
(all courses may be taken concurrently)

Requirements: **HSPH: EPI202**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Epidemiology 202 Section: 1

Epidemiologic Methods 2: Elements of Epidemiologic Research (190269)

Murray Mittleman

2019 Fall (2.5 Credits) **Schedule:** TR 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 160

Methods 2: Elements of Epidemiologic Research
Introduces elements of study design, data analysis and causal inference in epidemiologic research. Principles and methods are illustrated with examples, and reviewed through homework and in-class exercises. May serve as an introduction to more advanced study or as a concluding course for those desiring a working knowledge of epidemiologic methods. EPI 202 extends the concepts of study design, data analysis, and inference introduced in the introductory epidemiology courses.

Class Notes: **EPI 202 is equivalent to EPI 202S. If you have received credit for EPI 202S, you may not take EPI 202.**

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

EPI 202 extends the concepts of study design, data analysis, and inference introduced in EPI201.

Course Prerequisites:
(EPI201 or EPI208 or EPI500 or ID200) and (BIO200 or BIO201 or ID200 or BIO202&203 or BIO206&207 or BIO206&208 or BIO206&209)
(all courses may be taken concurrently)

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration

Epidemiology 202 Section: 1

Epidemiologic Methods 2: Elements of Epidemiologic Research (190269)

Instructor TBD

2013 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 76

Methods 2: Elements of Epidemiologic Reserach
Introduces elements of study design, data analysis and inference in epidemiologic research. Principles and methods are illustrated with examples, and reviewed through homework and in-class exercises. May serve as an introduction to more advanced study or as a concluding course for those desiring a working knowledge of epidemiologic methods. EPI 202 extends the concepts of study design, data analysis, and inference introduced in EPI201.
Course Prerequisites: (BIO200 or ID200 or BIO201 or BIO202&203 or BIO206&207/8/9) and (EPI201 or EPI208 or EPI500)

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration

Epidemiology 202 Section: 1

Epidemiologic Methods 2: Elements of Epidemiologic Research (190269)

Instructor TBD

2012 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 76

Methods 2: Elements of Epidemiologic Reserach
Introduces elements of study design, data analysis and inference in epidemiologic research. Principles and methods are illustrated with examples, and reviewed through homework and in-class exercises. May serve as an introduction to more advanced study or as a concluding course for those desiring a working knowledge of epidemiologic methods. EPI 202 extends the concepts of study design, data analysis, and inference introduced in EPI201.
Course Prerequisite(s): BIO200 or BIO201 or BIO202&203 or BIO206&207/8/9

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration

Epidemiology 202 Section: 1

Epidemiologic Methods 2: Elements of Epidemiologic Research (190269)

Instructor TBD

2012 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 175

Methods 2: Elements of Epidemiologic Reserach
Introduces elements of study design, data analysis and inference in epidemiologic research. Principles and methods are illustrated with examples, and reviewed through homework and in-class exercises. May serve as an introduction to more advanced study or as a concluding course for those desiring a working knowledge of epidemiologic methods. EPI 202 extends the concepts of study design, data analysis, and inference introduced in EPI201.
Course Prerequisites: Basic BIO and EPI courses or ID538

Additional Course Attributes:

Attribute	Value(s)

Epidemiology 202 Section: 1

Epidemiologic Methods 2: Elements of Epidemiologic Research (190269)

Murray Mittleman

2016 Summer (2.5 Credits) **Schedule:** MTWRF 1030 AM - 1220 PM

Instructor Permissions: None **Enrollment Cap:** 76

Methods 2: Elements of Epidemiologic Reserach
Introduces elements of study design, data analysis and inference in epidemiologic research. Principles and methods are illustrated with examples, and reviewed through homework and in-class exercises. May serve as an introduction to more advanced study or as a concluding course for those desiring a working knowledge of epidemiologic methods. EPI 202 extends the concepts of study design, data analysis, and inference introduced in EPI201.

Course Prerequisites:
(EPI201 or permission of the instructor) and (BIO200 or BIO201 or ID200 or ID207 or BIO202&203 or BIO206&207/8/9)
(all courses may be taken concurrently)

Requirements: **HSPH: EPI202**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration

Epidemiology 202 Section: 2

Epidemiologic Methods 2: Elements of Epidemiologic Research (190269)

Murray Mittleman

2020 Fall (2.5 Credits) **Schedule:** TR 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 150

EPI202 is a seamless continuation of EPI201. This course builds on the material from EPI201 and extends to concepts of statistical inference, data analysis methods and causal inference in epidemiologic research. Principles and methods are illustrated with examples, and reviewed through homework and in-

class exercises. This course is designed primarily for doctoral students majoring in Epidemiology and related fields, and those interested in a research career requiring a rigorous foundation in the design, conduct and analysis of epidemiologic studies.

EPI 201 and EPI 202 Lab Sections will be decided after enrollment through an internal survey.

Class Notes: **EPI 201 and EPI 202 Lab Sections will be decided after enrollment through an internal survey.**

Requirements: **EPI201 AND (BST201 or BST202&203 or BST206&207/8 or ID207 or PHS2000)**
(all courses may be taken concurrently)

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
HSPH: Course Category	Category 2: Required Course
HSPH: Indpt. Study / Research	NO

Epidemiology 202 Section: 2

Epidemiologic Methods 2: Elements of Epidemiologic Research (190269)

Murray Mittleman

2017 Fall (2.5 Credits) **Schedule:** TR 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 64

Methods 2: Elements of Epidemiologic Research
Introduces elements of study design, data analysis and inference in epidemiologic research. Principles and methods are illustrated with examples, and reviewed through homework and in-class exercises. May serve as an introduction to more advanced study or as a concluding course for those desiring a working knowledge of epidemiologic methods. EPI 202 extends the concepts of study design, data analysis, and inference introduced in the introductory epidemiology courses.

Course Prerequisites:
if taking in Summer: (EPI201 or EPI500 or EPI208 or ID201 or ID207 or permission of the instructor) AND (BIO200 or BIO201 or ID201 or ID207 or BIO202&203 or BIO206&207/8/9) (all courses may be taken concurrently)

if taking in Fall: (EPI201 or permission of instructor) AND (BST200 or BST201 or ID200 or ID207 or BIO202&203 or BIO206&207/8/9)
(all courses may be taken concurrently)

Requirements: **HSPH: EPI202**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Epidemiology 202 Section: 2

Epidemiologic Methods 2: Elements of Epidemiologic Research (190269)

Murray Mittleman

2018 Summer (2.5 Credits) **Schedule:** MTWRF 1030 AM - 1220 PM

Instructor Permissions: None **Enrollment Cap:** 76

Introduces elements of study design, data analysis and causal inference in epidemiologic research. Principles and methods are illustrated with examples, and reviewed through homework and in-class exercises. May serve as an introduction to more advanced study or as a concluding course for those desiring a working knowledge of epidemiologic methods. EPI 202 extends the concepts of study design, data analysis, and inference introduced in the introductory epidemiology courses.

Course Prerequisites: (EPI201 or EPI500 or EPI208 or ID201 or ID207) AND (BST201 or BST202&203 or BST206&207/8 or ID201 or ID207 or PHS2000) (all courses may be taken concurrently)

Class Notes: **EPI 202S is equivalent to EPI 202. If you have received credit for EPI 202, you may not take EPI 202S.**

Requirements: **HSPH: EPI202S**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
HSPH: Course Category	Category 2: Required Course

Epidemiology 202S Section: 1

Epidemiologic Methods 2: Elements of Epidemiologic Research (Summer) (207562)

Murray Mittleman

2019 Summer (2.5 Credits) **Schedule:** MTWRF 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 64

Introduces elements of study design, data analysis and causal inference in epidemiologic research. Principles and methods are illustrated with examples, and reviewed through homework and in-class exercises. May serve as an introduction to more advanced study or as a concluding course for those desiring a working knowledge of epidemiologic methods. EPI 202 extends the concepts of study design, data analysis, and inference introduced in the introductory epidemiology courses. An optional lab session is held daily from 1:00-1:50pm.

Course Prerequisites: (EPI201 or EPI500 or EPI208 or ID201 or ID207) AND (BST201 or BST202&203 or BST206&207/8 or ID201 or ID207 or PHS2000) (all courses may be taken concurrently)

Study Design in Epidemiologic Research (190270)

Sonia Hernandez-Diaz

Marc Lipsitch

2021 Spring (2.5 Credits) **Schedule:** TR 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 165

Beginning with the randomized clinical trial as a paradigm, this course examines common problems in the design, analysis, and interpretation of observational studies. Cohort and case-control studies are the focus of the discussion, but not to the exclusion of other designs. Problems of exposure and disease definitions, time-dependent effects, confounding, and misclassification are considered in the light of data sources typically available. Relevant statistical methods are introduced but not developed in detail.

Course Prerequisites: EPI202 and (BIO200 or ID200 or BST201 or BST202&203 or BST206&207/8/9 or PHS 2000A). All prerequisites may be taken concurrently.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | SM1 EPI, SM2 EPI, SD EPI, PhD PHS

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/7/2021 11:00AM – 1/19/2021 11:59PM

Wave 2 | 1/20/2021 12:00AM – 1/21/2021 11:59PM

Wave 3 | 1/22/2021 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **HSPH: EPI203**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
HSPH: Indpt. Study / Research	NO
HSPH: Course Category	Category 2: Required Course

Analysis of Case-Control, Cohort and Other Epidemiologic Data (190271)

Mingyang Song

2021 Spring (2.5 Credits) **Schedule:** MW 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 77

This course will examine, through practical examples, the use of regression methods for analyses of epidemiologic data, primarily case-control and cohort studies. Methods used will include linear, logistic, Poisson, conditional logistic and Cox regression models. The lectures will focus on the principle ideas and issues underlying the regression analyses, and the computer labs will provide practical experience applying those methods, using SAS software. Issues to be dealt with include dose-response, confounding, violation of standard assumptions, and interaction. It will emphasize analysis and interpretation of results in the context of the study design. Familiarity with basic SAS is required, as this will be used in the labs. This can be met through BIO 113 (Introduction to Data Management and Programming in SAS) or other significant SAS experience.

Course Activities: Written group projects, class discussion, quizzes, homework.

Course Note: Computer lab is required, please sign up for one lab session when registering.

Course Pre-requisites: (BST210 (concurrent enrollment allowed) or BST213 or PHS2000A/B) and (EPI200 or EPI201 or EPI208 or EPI505) and EPI202

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Analysis of Case-Control, Cohort and Other Epidemiologic Data (213562)

Lori Chibnik

Mingyang Song

2020 Spring (0 Credits) **Schedule:** W 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 26

This course will examine, through practical examples, the use of regression methods for analyses of epidemiologic data, primarily case-control and cohort studies. Methods used will include linear, logistic, Poisson, conditional logistic and Cox regression models. The lectures will focus on the principle ideas and issues underlying the regression analyses, and the computer labs will provide practical experience applying those methods, using SAS software. Issues to be dealt with include dose-response, confounding, violation of standard assumptions, and interaction. It will emphasize analysis and interpretation of results in the context of the study design. Familiarity with basic SAS is required, as this will be used in the labs. This can be met through BIO 113 (Introduction to Data Management and Programming in SAS) or other significant SAS experience.

Course Activities: Written group projects, class discussion, quizzes, homework.

Course Note: Computer lab is required, please sign up for one lab session when registering.

Course Pre-requisites: (BST210 (concurrent enrollment allowed) or BST213 or PHS2000A/B) and (EPI200 or EPI201 or EPI208 or EPI505) and EPI202

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | EPI(1st year students); SM1, SM2,

Wave 2 | EPI(2nd year students and beyond); SM1, SM2, NUT PHS

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/16/2020 01:00PM – 1/21/2020 11:59PM

Wave 2 | 1/22/2020 12:00AM – 1/23/2020 11:59PM

Wave 3 | 1/24/2020 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **Pre-requisites: (BST210 (concurrent enrollment allowed) or BST213) and (EPI200 or EPI201 or EPI208 or EPI505) and EPI202**

Practice of Epidemiology (190272)

Meir Stampfer

2020 Fall (2.5 Credits) **Schedule:** F 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 14

The seminars consist of student presentations of plans for collection and analysis of epidemiological data (typically for the doctoral dissertation), with discussion by students and faculty, mostly in Fall 2. Preparatory work is done under tutorial arrangements with members of the faculty in Fall 1 The emphasis is on conceptual issues necessary for the development of a feasible and informative epidemiological study.

Course Activities: Individual student grant proposal and presentation, class discussion, and student and faculty critiques.

Course Note: This course is aimed primarily at epidemiology and nutritional epidemiology doctoral students, usually in their third year.

Prerequisite: at least a full year of epidemiology methods and biostatistics methods. Two years of such courses is strongly preferred.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Prenatal Experience and Brain Development: Epidemiological Evidence (190273)

Instructor TBD

2013 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 20

This course focuses on methods used in pediatric and perinatal epidemiology with the goal of acquiring knowledge to critically evaluate published literature and to design top-quality research. Topics covered in this course will include: brain development in the fetal and neonatal period, pregnancy complications related to preterm birth, prenatal care and long term outcomes, hospital toxicology and sensory brain development, effects of prenatal experience on developmental disabilities, epigenetics of maternal adversity and developmental outcomes, and perinatal consequences of maternal obesity.

Course Prerequisites: EPI201 or EPI500

Additional Course Attributes:

Advanced Epidemiologic Methods (190274)

James Robins

2020 Fall (2.5 Credits)		**Schedule:**	MW 0345 PM - 0515 PM
Instructor Permissions:	None	**Enrollment Cap:**	62

Provides an in-depth investigation of statistical methods for drawing causal inferences from observational studies. Informal epidemiologic concepts such as confounding, selection bias, overall effects, direct effects, and intermediate variables will be formally defined within the context of a counterfactual causal model and with the help of causal diagrams. Methods for the analysis of the causal effects of time-varying exposures in the presence of time dependent covariates that are simultaneously confounders and intermediate variables will be emphasized. These methods include g-computation algorithm estimators, inverse probability weighted estimators of marginal structural models, g-estimation of structural nested models. As a practicum, students will reanalyze data sets using the above methods.

Course Activities: Class discussion, homework, practicum and final examination.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

These methods include g-computation algorithm estimators, inverse probability weighted estimators of marginal structural models, g-estimation of structural nested models. As a practicum, students will reanalyze data sets using the above methods.

Lab: There is an optional lab for this course on Thursdays in Fall 1 2016 from 1:30-3:20 in Kresge 502

Course Activities: Class discussion, homework, practicum and final examination.

Course Note: Familiarity with logistic regression and survival analysis is expected; lab time will be announced at first meeting.

Course Prerequisites: EPI204 or (BST210 and EPI289) or BST233

Requirements: **HSPH:**

Advanced Epidemiologic Methods (190274)

James Robins

Miguel Hernan

2018 Fall (2.5 Credits) **Schedule:** MW 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 62

Provides an in-depth investigation of statistical methods for drawing causal inferences from observational studies. Informal epidemiologic concepts such as confounding, selection bias, overall effects, direct effects, and intermediate variables will be formally defined within the context of a counterfactual causal model and with the help of causal diagrams. Methods for the analysis of the causal effects of time-varying exposures in the presence of time dependent covariates that are simultaneously confounders and intermediate variables will be emphasized. These methods include g-computation algorithm estimators, inverse probability weighted estimators of marginal structural models, g-estimation of structural nested models. As a practicum, students will reanalyze data sets using the above methods.

Course Activities: Class discussion, homework, practicum and final examination.

Class Notes: **Familiarity with logistic regression and survival analysis is expected. Attending lab is optional but highly recommended unless you are concurrently enrolled in BST 256. Lab will take place on Thursdays from 2:00p.m. - 3:30p.m.**

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | EPI SD, PHS-EPI

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 08/16/2018 01:00PM – 08/28/2018 11:59PM

Wave 2 | 08/29/2018 12:00AM – 08/30/2018 11:59PM

Wave 3 | 08/31/2018 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

*****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course***

Requirements: **EPI204 or (BST210 and EPI289) or BST233 Students outside of HSPH must request instructor permission to enroll in this course**

2020 Summer (5 Credits) **Schedule:** MTWRF 0945 AM - 1115 AM
MTWRF 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 175

This course is an introductory-level course and covers the principles and methods used in traditional and clinical epidemiologic research through a series of lectures, exercises, seminars, workshops and presentations. This course is targeted at individuals planning to conduct clinical or health services research.

Course Activities: Written assignments, computer exercises, seminar discussion; each student is required to develop a study proposal that addresses a specific clinical problem and to formally present this proposal to the class. These proposals are then written in grant application format as the final paper for the course. Seminars are held during scheduled class time.

Course is mutually exclusive with EPI200, EPI201, EPI500, EPI505, ID200, and ID538. You may not take both this course and any of those courses.

Course Restricted: Degree and non-degree Clinical Effectiveness students only (or instructor permission)

Requirements: **Course is mutually exclusive with EPI200, EPI201, EPI500, EPI505, ID200, and ID538. You may not take both this course and any of those courses.**

Course Restricted: Program in Clinical Effectiveness participants only (or instructor permission)

Epidemiologic Methods for Patient Safety and Quality (190276)

K. Maclure

Sebastian Schneeweiss

2017 Spring (1.25 Credits) **Schedule:** TWRF 0130 PM - 0520 PM

Instructor Permissions: None **Enrollment Cap:** 28

This course aims to prepare the student to design and conduct analyses of individual incidents and other n-of-1 studies, statistical process control and time series, designed delays in quality improvements, case-crossover studies and self-controlled case series. A case study will help to integrate topics: Surgical Quality Outcome Reports -- low-cost evaluation and spread of a quality improvement program. Patient safety officers are needed in every healthcare facility, and these people need basic skills in epidemiologic methods. Students in this course will be equipped to be facilitators of collaborative self-instruction in epidemiologic methods suited for local investigations, as well as to be competitive researchers who conduct crossover studies. They will acquire skills to evaluate studies by other people constructively while

being emotionally supportive. While comparisons among individual patients, practitioners and institutions are influential in patient safety epidemiology, the primary emphasis is on improvements: changes in outcomes over time. This involves a slight shift in paradigms from traditional emphasis in epidemiology on between-person comparisons in cohort and case-control studies to within-person comparisons, as in crossover experiments and case-crossover studies.

Class Notes: **Course meets 1/16 - 1/20**

Study Design in Clinical Epidemiology (190277)

Mohammad Ikram

Albert Hofman

2020 Summer (2.5 Credits) **Schedule:** MTWRF 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 50

This class aims to bridge the gap between theoretical epidemiological concepts and their practical application in clinical research. Discussion during class will revolve around the theoretical principles of epidemiology, application of these principles in quantitative clinical research; and interpretation of quantitative results with respect to clinical medicine and daily practice. Students will learn how abstract concepts from epidemiological theory can be translated to clinically observable phenomena.

At the end of the course the student will be able to do the following:

1. Critically interpret the literature in the field of clinical epidemiology.

2. Have thorough understanding of major epidemiologic issues concerning etiology, diagnosis, prognosis and treatment.

3. Design and evaluate intervention and observational studies in clinical medicine.

The course includes both didactic lectures and small group exercises. The exercises will provide the opportunity to discuss, in greater depth, the theoretical constructs covered in the lectures.
This course is intended to be a bridging course between introductory courses in epidemiology and clinical effectiveness and advanced specialized courses in specific topics in clinical epidemiology and clinical research.

Requirements: **Pre-requisites: ID201 or ID207 or EPI200 or EPI201 or EPI208 or EPI500**

2018 Summer (2.5 Credits) **Schedule:** MTWRF 0330 PM - 0520 PM

Instructor Permissions: None **Enrollment Cap:** 50

The purpose of this class is to discuss the principles and methods of epidemiology for quantitative clinical research, i.e. clinical epidemiology; to demonstrate their applicability in research in clinical medicine; and to demonstrate their relations with public health research. At the end of the course the student will be able to do the following:

1. Critically interpret the literature in the field of clinical epidemiology.
2. Evaluate critically major clinical epidemiologic issues concerning diagnosis, prognosis and treatment.
3. Design and analyze an intervention study.
4. Design and analyze an observational study.

The course includes both didactic lectures and small group exercises and workshops. The exercises will provide the opportunity to discuss, in greater depth, the principles covered in the lectures.

Course Prerequisites: ID201 or ID207 or EPI200 or EPI201 or EPI208 or EPI500 or EPI505. This course is intended to be a bridging course between introductory courses in epidemiology and clinical effectiveness and advanced specialized courses in specific topics in clinical epidemiology and clinical research.

Epidemiology 210 Section: 1

Study Design in Clinical Epidemiology (190277)

Instructor TBD

2015 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 50

The purpose of this class is to discuss the principles and methods of epidemiology for quantitative clinical research, i.e. clinical epidemiology; to demonstrate their applicability in research in clinical medicine; and to demonstrate their relations with public health research. At the end of the course the student will be able to do the following:

1. **Critically interpret the literature in the field of clinical epidemiology.**
2. **Evaluate critically major clinical epidemiologic issues concerning diagnosis, prognosis and treatment.**
3. **Design and analyze a treatment efficacy study.**
4. **Design and analyze a treatment safety study.**

The course includes both didactic lectures and small group exercises and workshops. The exercises will provide the opportunity to discuss, in greater depth, the principles covered in the lectures.

Course Prerequisites: EPI208 or EPI500 or ID201 or EPI201 or ID207 or EPI505 or ID200. This course is intended to be a bridging course between introductory courses in epidemiology and clinical effectiveness and advanced specialized courses in specific topics in clinical epidemiology and clinical research.

Epidemiology of Cancer (190280)

Lorelei Mucci

Edward Giovannucci

2021 Spring (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 67

This course provides an overview of the concepts and issues central to the discipline of cancer epidemiology. We delve into the descriptive epidemiology of cancer as well as analytical epidemiology to explore cancer risk factors and preventive factors. The lectures cover topics on specific cancer exposures, including tobacco, obesity, infections, and nutrition, as well as the epidemiology of selected malignancies, including breast, prostate, colon, ovarian, primary liver, and pancreatic cancers. Throughout the course, we highlight epidemiology concepts and study design issues central to the study of cancer.

Course Activities: Journal article critique, group discussion, descriptive epidemiology project of a specific cancer, a final quiz

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
HSPH: Indpt. Study / Research	NO
HSPH: Course Category	Category 3: Essential Course

Epidemiology of Cancer (190280)

Lorelei Mucci

Edward Giovannucci

2020 Spring (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 67

The aim of this course is to present an overview of the basic concepts and issues central to cancer epidemiology. We consider the descriptive epidemiology of cancer with a focus on patterns of cancer across the world. We discuss a range of risk factors for cancer, taking into account the underlying biology and pathology of disease. We present topics both with respect to key cancer exposures, including smoking, radiation, nutrition, and hormones, and also highlight selected malignancies.

Course Activities: Active class participation, group discussion around issues in cancer screening, descriptive epidemiology project of a specific cancer site, a final quiz

Additional Course Attributes:

Advanced Topics in Case-Control and Cohort Studies (190282)

Lori Chibnik

Peter Kraft

2020 Fall (2.5 Credits) **Schedule:** MW 0200 PM - 0330 PM
R 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 48

This course primarily extends the applications of parametric regression models to address additional and related analytic issues encountered in epidemiologic research. Topics include techniques for modeling count outcomes, issues involved in high dimensional data analysis, building and assessing, risk prediction models, methods to account for missing data, and reproducible research. Emphasis is on applications of interpretations of results with limited introduction to theory that underlies these techniques. Familiarity with R or SAS is desirable.

Requirements: **Pre-requisites: EPI201 and BST 200 or BST 201 or ID200 or ID207 or BST202&BST203 or BIO 206&207/8/9 or PHS 2000.**
Non-HSPH students must request permission from the instructor to enroll in the course

Epidemiology of Adult Psychiatric Disorders (190284)

Olivia Okereke

2020 Fall (2.5 Credits) **Schedule:** F 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 30

The goal of this course is to provide students with a working knowledge of the epidemiologic and clinical aspects of adult psychiatric disorders. A range of studies from early classics to recent work on the prevalence, risk factors, and distribution of major mental disorders will be covered. Emphasis will be placed on how a life-course perspective informs research on etiology, treatment and prevention. Through class discussion and completion of written assignments, special attention will be paid to the unique methodological and analytic issues highlighted in psychiatric epidemiological research. Students will consider implications for public health programs, interventions, and prevention.

Requirements: **Pre-requisites: EPI200 or EPI201 or EPI208 or EPI500 or EPI505 or ID201 or ID538 or ID207. Concurrency is allowed for all courses. Non-HSPH students must request permission from the instructor to enroll in the course**

Assessment Concepts and Methods in Psychiatric Epidemiology (190286)

Deborah Blacker

Bizu Gelaye

2020 Fall (2.5 Credits) **Schedule:** F 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 32

Presents the application of basic epidemiologic and psychometric concepts and methods in psychiatric research. Topics include: measurement theory, reliability, validity, screening, and diagnostic classification procedures, as they specifically relate to psychiatric research. The course is in the psychiatric epidemiology track and is intended primarily for students interested in conducting mental health research.

Course Activities: Class discussion, brief homeworks, class project with oral presentation and final paper.

Course Note: Students should be familiar with the major forms of psychopathology, basic epidemiologic research methods, and introductory statistics; lab or section time to be arranged at first meeting.

Requirements: **HSPH: EPI219**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Epidemiology 219 Section: 1

Assessment Concepts and Methods in Psychiatric Epidemiology (190286)

Deborah Blacker

2019 Fall (2.5 Credits) **Schedule:** F 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 32

Presents the application of basic epidemiologic and psychometric concepts and methods in psychiatric research. Topics include: measurement theory, reliability, validity, screening, and diagnostic classification procedures, as they specifically relate to psychiatric research. The course is in the psychiatric epidemiology track and is intended primarily for students interested in conducting mental health research.

Course Activities: Class discussion, brief homeworks, class project with oral presentation and final paper.

Course Note: Students should be familiar with the major forms of psychopathology, basic epidemiologic research methods, and introductory statistics; lab or section time to be arranged at first meeting.

Class Notes: **Pre-requisites: ID538 or ID201 or [(BIO200 or BST201 or BST202&203 or BST206&207 or BST206&208/209 or PHS2000A) and (EPI500 or EPI201 or EPI208 or EPI500 or EPI505)]**

All courses may be taken concurrently

Non-HSPH students must request permission

Requirements: **HSPH: EPI219**

Additional Course Attributes:

Psychiatric Diagnosis in Clinic and Community Populations (190287)

Instructor TBD

2013 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 25

Offered Alternate Even Years

Focuses on interview schedules designed to diagnose psychiatric disorders in clinical settings and household surveys. The course provides practical experience in differential diagnosis, in the administration of different kinds of interview schedules, and in analysis of responses. The course is designed primarily for students considering a career in mental health research. The course is an applied, mid-level course in the psychiatric epidemiology track.

Course Activities: Class discussion, verbal and written reports on practicum experience.

Course Note: Students should have an understanding of the major forms of psychopathology; introductory statistics and epidemiology; clinical or research experience with psychopathology or prior psychiatric epidemiology coursework.
Course Prerequisites: ID538 or [(BIO200 or BIO201 or BIO202&203 or BIO206&207/8/9) and (EPI200 or EPI201 or EPI208 or EPI505)]

Pharmacoepidemiology (190288)

Joshua Gagne

Sonia Hernandez-Diaz

2020 Fall (2.5 Credits) **Schedule:** MW 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 50

This course provides an overview on inference about the effects of pharmaceuticals and other medical products on health outcomes from case reports, case series, vital statistics and other registration schemes, cohort studies, and case-control studies. Decision-making with inadequate and imperfect data is examined from the perspectives of manufacturers, regulators, and researchers. This course is intended primarily as an introduction to pharmacoepidemiology for students wishing to pursue a career in pharmacoepidemiology as well as a survey course for those who may be consumers of pharmacoepidemiologic studies, but may also have more general interest as an applied mid-level course with a methodological emphasis.

Course Activities: Written individual and group assignments, modelled after real-world scientific contributions (e.g., letter to the editor, peer review of pharmacoepidemiologic study) and class discussion.

Course Note: Knowledge of epidemiology at the level of EPI 201 and a basic understanding of drug use and nomenclature are assumed.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Additional Course Attributes:

Joshua Gagne

Sonia Hernandez-Diaz

2017 Fall (2.5 Credits) **Schedule:** MW 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 50

Within the framework of formal epidemiologic analysis, this course covers inference about the effects of pharmaceuticals from case reports, case series, vital statistics and other registration schemes, cohort studies, and case-control studies. Decision-making with inadequate data is examined from the perspectives of manufacturers and of regulators. Students are graded on the basis of group projects. This course is intended primarily for students wishing to pursue a career in the pharmaceutical industry or in national regulatory bodies, but may have more general interest as an applied mid-level course with a heavy methodological emphasis.
Course Activities: Written and oral group projects, individual class presentations, class discussion.
Course Note: Knowledge of epidemiology at the level of EPI 202 and a basic understanding of drug use and nomenclature are assumed; completion of EPI 203 preferred.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Genetic Epidemiology of Diabetes, Obesity, and Their Complications (190289)

Alessandro Doria
Hetal Shah

2021 Spring (2.5 Credits) **Schedule:** WF 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 24

Offered in alternate even years, the course will discuss the search for genetic factors contributing to diabetes, obesity, and their complications and will use this as a case study to illustrate genetic epidemiology strategies for investigating the etiology of complex disorders. Recent advances in genome-wide associations, epigenetics, and other -omics studies concerning diabetes, obesity, and their cardiovascular and kidney complications will be discussed in depth. Techniques of molecular genetics relevant to epidemiologic studies will be reviewed and data sets including genetic information will be analyzed with emphasis placed on the examination of genome-wide associations and various gene/environment interactions.

Course Prerequisite(s): EPI202

Requirements: **HSPH: EPI222**

Additional Course Attributes:

Epidemiology 223 Section: 1

Cardiovascular Epidemiology I (190290)

Majken Jensen

2016 Fall (2.5 Credits) **Schedule:** MW 0130 PM - 0320 PM

Instructor Permissions: None **Enrollment Cap:** 26

This course reviews the epidemiology of cardiovascular disease, including the major cardiovascular diseases, related conditions, emerging risk factors, and current controversies. The principal methods used, and their limitation, will also be discussed. Both historically important and current research will be presented. Grades are based on participation in class discussions, brief written paper critiques, and an in-class presentation. There is no midterm or final exam.

Additional Course Attributes:

All: Cross Reg Availability	Available for Harvard Cross Registration

Epidemiology 224 Section: 1

Cancer Prevention (190291)

Kathryn Wilson

2017 Spring (2.5 Credits) **Schedule:** MW 0830 AM - 1020 AM

Instructor Permissions: None **Enrollment Cap:** 24

The course will help students develop a framework for analyzing and designing cancer prevention interventions to reduce the burden of cancer. Approaches to cancer prevention will be reviewed with the principal emphasis on primary prevention. The lectures and readings will examine different theoretical and practical issues around effectiveness, feasibility, and sustainability of interventions, including theories of behavior change, population vs. high-risk approaches, risk perception and communication, and barriers to implementation. Through problem-based learning exercises, students will review the strategies for cancer prevention in the areas of tobacco control, physical activity and obesity, and screening and vaccines, in addition to other topics. We will emphasize the timing of prevention in the context of the natural history of disease etiology (e.g. breast cancer) and consider population-based approaches to prevention (e.g. skin cancer). Strategies for prevention on multiple levels will also be examined. Levels of intervention from action by health care providers (e.g., counseling and screening), regulatory policy, social structural changes, and individual behavior changes will be emphasized. Key components necessary for prevention policy will include an adequate knowledge base, social strategies, and political will. Students will have homework assignments to collect and summarize information based on case studies, which will be used to develop a cancer prevention intervention as a final project. Grades will be based on class participation, short homework assignments and a final project paper and presentation.

Course Note: Requirement in the Cancer Education Program.

Course Prerequisite(s): EPI202 or ID201; may not be taken concurently.

Requirements: **HSPH: EPI224**

Epidemiology 227 Section: 1

Child Psych Epidemiology (190294)

Henning Tiemeier

2018 Spring (1.25 Credits) **Schedule:** MTWRF 0800 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 35

Psychiatric problems frequently occur in children and adolescents. Epidemiological methods are used in child psychiatric research to study the occurrence of psychiatric disorders, test causal hypotheses and investigate the developmental trajectories.

In this course epidemiological research and methods in Child and Adolescent Psychiatry will be discussed in depth. Using an interactive approach most material is presented in seminar format. A wide range of topics will be covered ranging from descriptive epidemiology, major research milestones, current methodological challenges to a future research agenda for Child and Adolescent Psychiatry. These themes are linked to selected major disorders. Other seminars will cover selected research topics. Students are

engaged to evaluate and design different research projects. Particular emphasis lies on study designs with a developmental, multi-informant, or multi-method approach.

Upon completion of the course the student will be able to:

1. Critically interpret the literature in the field of Child and Adolescent Psychiatry.

2. Evaluate critically major child psychiatric research themes such as nosology, genetics, brain imaging or multi-informant approach.

3. Design and analyze a Child Psychiatric epidemiological study.

This course is intended primarily for doctoral and master students with interest in developmental or psychiatric research. However, the course should be of interest for any student whose career might involve behavioral or emotional problems in children or psychiatric problems in adults.

Course Prerequisite(s): EPI200 or EPI201 or EPI208 or EPI500 or ID 201 or EPI505 or ID538 or ID207; may not be taken concurrently.

Requirements: **HSPH: EPI227**
